

**THE GOVERNMENT PRINTED  
\$7 TRILLION IN THREE YEARS.  
PRICES EXPLODED. YOUR  
PAYCHECK DIDN'T. HERE'S WHO  
ACTUALLY GOT THE MONEY.** 

**Between 2020 and 2023, the U.S. money supply increased by over 40%.**

**That means 40% of all dollars in existence were created in just three years.**

**When the money supply explodes... prices follow. But wages don't.**

**Inflation hit 9.1%, the highest in 40 years.**

**But wages only grew around 4%.**

**You got a pay cut disguised as "inflation."**

## So Where Did the \$7 Trillion Go?

Not to workers.

Not to savers.

Not to the middle class.

Let's follow the money.

## **Winner #1: Wall Street.**

**The flood of cheap money sent the stock market into one of the fastest bull runs in history.**

**Corporate profits soared. Executives cashed in.**

**The average worker? Still stuck with the same bills but higher.**

## Winner #2: Big Corporations.

Stimulus + low interest rates = Massive buybacks, record profits, and rising prices.

Companies raised prices faster than their own costs, creating "greedflation." And you covered it.

## Winner #3: Asset Owners.

While wages flatlined...

- Housing exploded
- Stocks exploded
- Crypto exploded
- Used cars exploded

Anyone who owned assets got richer.  
Anyone who didn't got crushed.

## **Loser #1: The Middle Class.**

**Your savings lost value.  
Your dollars bought less.  
Your bills grew faster than your income.**

**You didn't benefit from the money printing,  
you paid the price for it.**

## **Loser #2: Renters.**

**When asset prices go up...rents follow.**

**Landlords passed the new costs to tenants.**

**Rent hit record highs while wages did nothing.**

### **Loser #3: Savers.**

If you kept money in a bank account,  
you got destroyed.

**Inflation outpaced interest by 500%+.  
Your cash melted while you slept.**

**Money printing doesn't make everyone richer.  
It transfers wealth.**

**From savers to asset owners,  
From workers to corporations, From the  
middle class to the top 1%.**
